

Aerators & Fountains

...ideal for virtually any application

Otterbine aerating fountains & industrial aerators help give nature a boost by treating the causes of poor water quality. Otterbine has adopted disciplines from waste-water engineering and lake management experts to produce highly effective aeration systems and offer beautiful fountain-like spray patterns.

Reducing algae and foul odours, our aerators improve your water quality and are backed by a 5-year warranty to insure that they get the job done. Whether it's the pond in your backyard, irrigation pond on a golf course or farm, detention pond in your community - anywhere you are looking to improve water quality and perhaps create some aesthetic appeal we have a solution for you!

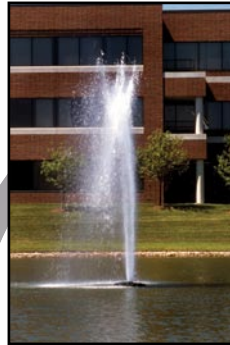

RESIDENTIAL

Do you have a small little pond in your backyard and no matter how hard you try you just can't seem to get rid of that algae during the Summer months? With aerators ranging from 1/6HP to 5HP Otterbine has an answer for you, and will provide you with a serene and tranquil setting.

COMMERCIAL

When a dramatic eye-catching effect is needed, Otterbine comes to the rescue! Otterbine units offer spectacular displays and are often specified by landscape architects to provide impressive aesthetic enhancement at large corporate offices and commercial developments, adding the air of prestige and also making the development easy to see from highways and in aerial views. Besides adding beauty to ponds, Otterbine units also add powerful aeration to the water keeping it crisp & clean!

GOLF MARKET

Ideal for irrigation ponds, Otterbine aerators are able to manage effluent water conditions improving the water quality and allowing you to recycle the water through your pumps with less clogging, meaning lower maintenance and less cost.

MUNICIPAL

Do you own or manage a large body of water that is used recreationally? Looking to add a breathtaking display or the opposite, a barely visible system? There is an Otterbine unit perfect for your situation as Otterbine's surface units add a spectacular display pattern and our sub-surface aerators are virtually undetectable! Even in large ponds Otterbine units deter algae growth, odour, fish kills and discoloration. So in most cases there is no need for the use of additional chemicals and algaecides.

ESTATES AND HOUSING DEVELOPMENTS

To maximise the value of your property while enhancing your water feature, install an Otterbine aerator or fountain! They; keep water healthy and clear, create a serene water appearance for tenants, make a grand welcome in entrance ways into housing developments, and are attention-grabbing from highways. Want a more dramatic night-time scene?

Otterbine's Fountain Glo™ lighting creates an exquisite nighttime display, bathing your fountain in colour. Adding lights will also increase security of the property.

FARM

Whether you have a small, shallow pond or a large, deep pond Otterbine's aerators can be of extreme use! They deliver full aeration to irrigation, utilitarian and pasture ponds and are much more efficient than the average agitator. Otterbine aerators work to induce oxygen into the pond and create circulation, thus leaving your pond with plenty of oxygen for fish, and free from algae, discoloration and odours!

Especially on farms where more than one pond or lake requires aeration, Otterbine fractional aerators can easily be moved from application to application.

LANDSCAPE DESIGN

A perfect compliment to any setting, Otterbine aerators and fountains create impressive displays and focal points to your landscape. We offer complete specifications on all products.
